

## LIGHTING YOUR DOLLS HOUSE

**Battery Lighting Guide** - LED battery lighting is a popular option for dollhouses that have already been built and decorated, smaller houses or projects that may not be able to be wired or it may be that you would like to change the decoration of your house or move the lights into different positions.

LED single battery lights are manually switched on. When required you can change the battery by unscrewing the base of the lamp. The generic battery needed is a 377a button cell, it may change for different lights, please always check the battery code before purchasing replacements.

After you have chosen your style of light, checked its working, you are ready to position your light. Magnetic discs can be useful if you feel necessary to give a firmer hold to battery lights, pictures, or other miniatures in place. Glue one magnet to the wall or ceiling where you wish to attach your light or picture and glue the other magnet to the back of the light or picture. If you would like to move your light in the future, please keep in mind the type of glue you are using as when you come to remove the magnet it may damage your decoration.

We have an extensive selection of LED battery lights for you to choose from suitable for any room in your doll's house, from ceiling lights, wall lights, lamps, and other lights.

### **12 volt system - Electrical Lighting**

Electric lighting is not as popular as once used to be with the advent of Battery Lighting and its advantages. If you choose electric lighting it will require running wires, please keep in mind where you will place them and how you will hide the wires which can be time consuming. Items required to begin electric lighting system are:

12v transformer power supply/A fused power socket strip/Power socket strip extensions if required

When purchasing your transformer, please note each transformer power supply will have a capacity on how many lights it will be able to light. There are different transformers for different plug outlets within the world, Don't forget you will also require a power socket strip for you to plug into your lights,

Any queries please do not hesitate to contact us.
